About

I am an optimistic and hardworking individual passionate about Machine Learning. I enjoy exploring new challenges and continuously improving my skills. Open to relocating for the right opportunity.

Internship

FLSmidth (1st July – 31st July 2024)

I developed a CNN model using TensorFlow to classify car models based on specific categories. I also worked on predictive modeling and anomaly detection using sensor data and implemented time-series forecasting for optimized decision-making. My role involved Python, TensorFlow, and Scikit-learn for data preprocessing, model training, and evaluation, applying ML techniques to real-world challenges.

Altrosyn Technologies pvt ltd (26th May – 31st August 2025)

Worked on building an intelligent document processing system using Supabase, Next.js, FastAPI, and Google Gemini API to convert uploaded files into Alpaca-formatted datasets. Developed full-stack functionality for uploading, parsing, and chunking documents with real-time status feedback and integration with generative AI models.

Technical Skills

Programming Languages: Python, Java

Design Tools: Blender, Solidworks

Tools: Excel, PowerBI, Figma, Canva, Tableau

Robotics: Deep Learning, Object Detection

Query Languages : MySQL Workbench

Web Technologies: HTML, CSS, NextJs

Database: Supabase

Languages: English, Tamil

Softskill : Leadership, Communication, Creativity

Projects

Drone and Rover for Agriculture

Developed an ML-driven system using drones and high-resolution aerial imaging to detect plant diseases across 12 plant types. Built a CNN model for accurate disease classification. It is a sensor-based soil monitoring, and intrusion detection alerts, providing farmers with real-time insights for optimized crop protection and yield management.

Smart Helmet - Road Safety

Developed an advanced motorcycle helmet integrating a carbon fiber build for durability and lightweight comfort. Features include alcohol detection, fatigue monitoring, GPS tracking, digital displays, and an airbag deployment system to enhance rider safety and accident prevention.

AI-Powered Document to Alpaca Dataset Converter

Developed a web-based tool to upload and process documents using Supabase, Next.js, and FastAPI, converting them into Alpaca-format datasets. Integrated Google Gemini API for intelligent chunking and text generation to support LLM fine-tuning workflows.

Education

St Joseph's Institute Of Technology

Bachelor of Technology, Artificial Intelligence And Data Science (CGPA: 8.39)

2022 - 2026

Chennai,TamilNadu

Hackathon

NextNiche, AIT Pune **(5th place)**

Hackit3.0, SVCE Sriperumbudur **(Finalist)**

NextNiche Shark Tank, AIT Pune **(7th place)**

AI-ZYPHER'24Shark Tank, SRM **(Runner-Up)**
